

## Four Points Technology's Points of View

- Overwhelmed by all of the options available in today's Multi-Cloud world?
- Struggling to find a flexible and scalable Multi-Cloud option that optimizes performance, security, and compliance without breaking the bank or locking you in to one vendor?
- Worried about your organization's cybersecurity program amidst an ever-increasing number of cyber attacks?
- Interested in incorporating Zero Trust and post-quantum encryption into your cybersecurity program, but don't know where or how to start?
- Trying to protect your organization's mission-critical data, but not sure how to ensure it never gets lost or stolen?
- Heard about "Air-Gapped" solutions strengthening security postures, but need support in finding the right solution for your organization (cyber vault, data diodes, cross-domain)?
- Confused by the ever-changing terminology and offerings associated with Artificial Intelligence (AI)?

If you relate to any of these statements, Four Points Technology is here to help you and your organization learn how to adapt and succeed!

# Four Points Technology's Point of View on...

## Multi-Cloud

Too often people use Multi-Cloud to just mean “multiple clouds” or reference the big Cloud Service Providers (CSPs), when, really, Multi-Cloud includes SaaS and Private Cloud applications, on-premises systems, and co-location environments like Equinix and Rackspace.

### Benefits:

- Flexible and scalable
- Unified customer experience
- Enhanced security and compliance
- Avoid vendor lock-in
- Pick and choose CSP-specific capabilities
- Optimize performance
- Save money

## Cybersecurity

Making sure that your organization's security posture is not exposed requires a baseline understanding of its cyber-resiliency and regular check-ins to eliminate errors and make necessary updates. The cybersecurity best practice is to assume that a breach is a matter of “when,” not “if”. Staying up-to-date on your security posture helps keep you ahead of the curve.

As you develop, or fine-tune, your cybersecurity program, there are an exponential number of things to consider:

- Have you addressed every pillar and activity included in CISA's Zero Trust maturity foundations?
- Did you incorporate current technologies and techniques to detect anomalies?
- Have WFH policies and the dynamic IT boundaries caused by virtual teaming been considered?
- Would AI enhance your program?

## Air-Gapped Solutions

Do you know the security status of EVERY external client/vendor you meet with online? When meetings are hosted on platforms like Teams, Zoom, and Meet, the other party's security posture can put your organization at risk. This is where a *cross-domain solution (CDS)* could come in handy, enabling secure information transfer between different security domains.

Everyone knows firewalls and security controls are important, but these logical air-gapped solutions are not always enough. In comes physical air-gapped solutions, like *cyber vaults*, which are completely isolated from external networks. Our best-in-class approach ensures that isolation, as well as immutability and intelligence. To take that *cyber vault* to the next level, consider supplementing with *data diodes*, specialized hardware devices that ensure your data only flows in one direction.

## AI

AI terminology, just like the field itself, is constantly evolving and can be confusing. Terms like GenAI, Machine Learning, Deep Learning, and Large Language Models (LLM) can be misunderstood with all of the definitions floating around for each.

“Agentic AI” is a recent and popular term as agencies try to leverage AI bots in the ever-challenging budget constraints of the federal government without hallucinations or bad answers.

Our team can help you keep everything straight and, most importantly, help you find the outcome you are looking to achieve through whiteboarding sessions that hash out organizational priorities and goals.

Unsure of where to start or what services to incorporate within your organization?

Four Points Technology can help you simplify the process and tailor your program to your organization's needs.
